Mark Scheffer, IT Executive Director - Health Information Exchange, Alberta Health Services

Biography

Mark is responsible for the Health Information Exchange which, at AHS means ways to share information across the health care system: integration engines, Netcare, EDelivery, middleware, websites, SharePoint, corporate and clinical analytics systems, master data, and archiving, among other stuff. To his surprise, he's been working in healthcare IT for 25 years. Connect Care is the first time he's seen a successful clinical information system implemented at a large scale and he's proud to be associated with the talented people that made it so. Connect Care is transforming health by giving all Albertans a single health record and by giving all clinicians the ability to share the best medical practices available.
